Exercise 7
Web Application Reconnaissance

AIM

To perform reconnaissance on an assigned web application by identifying its pages, forms and input fields, and to draw an application map showing the discovered pages and navigation paths.

PROCEDURE

a) Identifying Pages, Forms and Input Fields

1. Open the target web application (testphp.vulnweb.com) in a browser.
2. Manually browse through the application, clicking every visible link, menu and button to discover all accessible pages.
3. Use Burp Suite in proxy mode to intercept traffic while browsing, so every request is logged in the Site Map / HTTP History.
4. For each page found, note the URL, page title and purpose (login, search, product listing, contact, etc.).
5. On each page, identify all forms present (login form, search form, feedback form, etc.) using View Page Source (Ctrl+U) or browser Inspect Element.
6. For each form, list the input fields (text box, password, hidden field, dropdown, checkbox) and the HTTP method (GET/POST) and action URL used to submit it.

7. Use a crawler tool such as Burp Suite Spider or OWASP ZAP Spider to automatically discover additional pages and links not found manually.

b) Drawing the Application Map

1. List all discovered pages along with the links/navigation options available on each page.
2. Arrange the pages in a hierarchical structure starting from the home page.
3. Draw the application map (as a tree/flow diagram) showing each page as a node and the navigation path between pages as connecting arrows.
4. Mark pages containing forms or input fields separately in the map.

OBSERVATION TABLE

S.No	Page URL	Page Purpose	Forms Present	Input Fields	Method
1	/index.php	Home page	None	-	-
2	/login.php	User login	Login form	username, password	POST
3	/signup.php	User registration	Signup form	uname, upass, uemail	POST
4	/search.php?	Product search	Search	searchFo	GET

S.No	Page URL	Page Purpose	Forms Present	Input Fields	Method
	test=query		form	r	
5	/listproducts.php?cat=1	Product listing	None	-	-
6	/product.php?pic=1	Product details	Add to cart form	price, pic	POST
7	/guestbook.php	Feedback/ comments	Guestbook form	name, comment	POST
8	/AJAX/index.php	AJAX demo page	Input form	input fields for live search	GET

OUTPUT

Application Map:

Home (/index.php)

├── Login (/login.php) [Form: username, password]

├── Signup (/signup.php) [Form: uname, upass, uemail]

├── Categories (/categories.php)

│ └── Product Listing (/listproducts.php?cat=1)

│ └── Product Details (/product.php?pic=1) [Form: add to cart]

├── Search (/search.php) [Form: searchFor]

├── Guestbook (/guestbook.php) [Form: name, comment]

└── AJAX Demo (/AJAX/index.php) [Form: live search input]

Burp Suite Site Map output:

http://testphp.vulnweb.com/

http://testphp.vulnweb.com/login.php

http://testphp.vulnweb.com/signup.php

http://testphp.vulnweb.com/search.php?test=query

http://testphp.vulnweb.com/listproducts.php?cat=1

http://testphp.vulnweb.com/product.php?pic=1

http://testphp.vulnweb.com/guestbook.php

http://testphp.vulnweb.com/AJAX/index.php

RESULT

Thus, reconnaissance on the assigned web application was successfully performed. The pages, forms and input fields of the application were identified, and an application map showing the discovered pages and navigation paths was drawn.
